

# Fenner® Torque Drive PLUS® 3

# Fenner® Torque Drive PLUS® 3

# Fenner® Torque Drive PLUS® 3

**Fenner Torque Drive PLUS® 3** offers:

- State of the art power ratings.
- Compact drive package - reduced weight.
- Quiet operation.
- Accuracy of positioning.
- Anti-static as standard.
- Runs on standard HTD pulleys.

In the mid 1990s, Torque Drive Plus (MR) was introduced to give significantly enhanced power capacity over HTD (M) belt drive systems, with lower noise levels and lower backlash.

The next generation was TDP2 (MGT), but continuous development work has now produced Fenner Torque Drive Plus 3, with all these attributes and yet higher power capacity.

Designated MXP these belts are available in 8mm and 14mm pitches, with the same standard widths and lengths as HTD and TDP/TDP2, and operate in standard HTD pulleys.

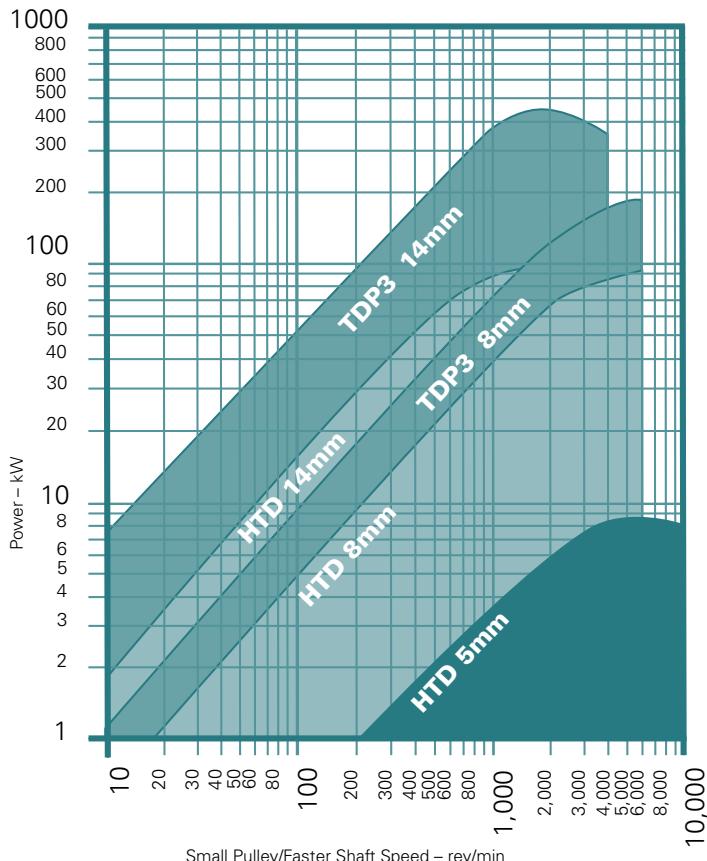

They allow design of lighter, more compact, more cost-effective drive packages.

Alternatively, their use on existing HTD or TDP/TDP2 drives will give longer service life.

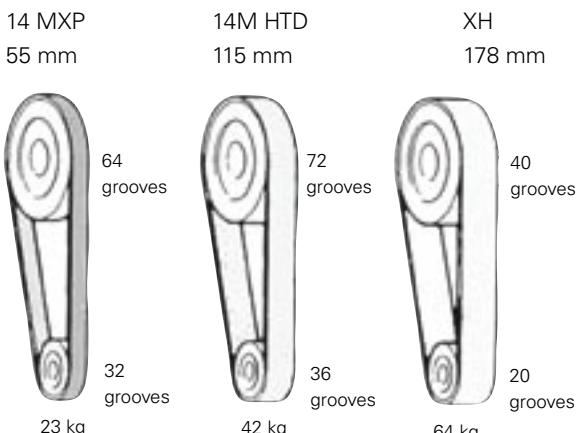

Torque Drive Plus 3 is the ultimate in rubber/glass-fibre synchronous belts.

The Fenner HTD and Torque Drive Plus 3 drive systems conform to the ISO 13050 standard.

COMPARISON OF HTD, TORQUE DRIVE PLUS3 DRIVE POWER RATINGS

## DRIVE PACKAGE COMPARISON

### Drive Condition

Driver: 45 kW motor  
1460 rev/min  
16 hrs/day

Driven: Rotary gear pump  
730 rev/min ± 5%

## ANTI-STATIC AS STANDARD

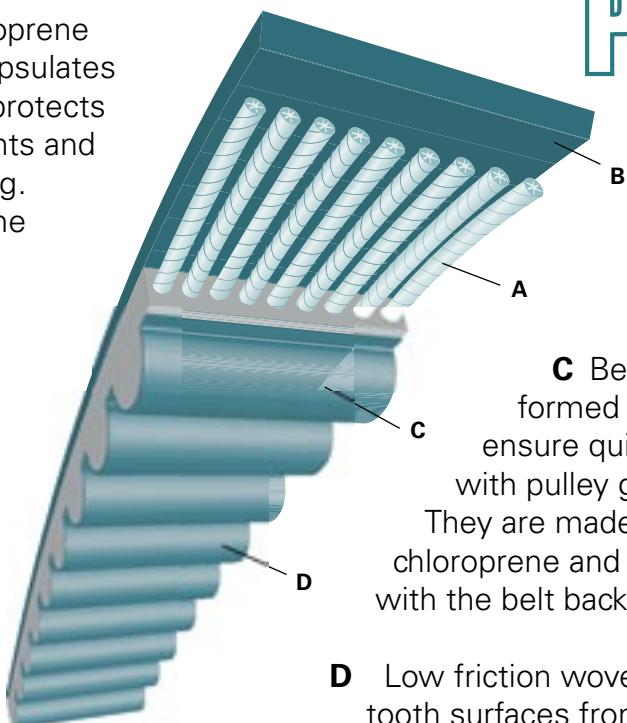

Fenner Torque Drive Plus 3 belts are static conductive to the definitive ISO 9563 standard.

# Torque Drive PLUS® 3

**A** Helically wound glass-fibre tensile member gives high tensile modulus and excellent fatigue life.

**B** Flexible, durable chloroprene backing polymer, encapsulates the tensile cords and protects them from contaminants and mechanical damage e.g. from idler pulleys on the back of the belt.

## Torque Drive PLUS<sup>®</sup> 3

**C** Belt teeth are precisely formed and accurately spaced to ensure quiet, efficient engagement with pulley grooves.

They are made of medium hardness chloroprene and are bonded integrally with the belt backing.

**D** Low friction woven nylon facing protects tooth surfaces from wear and aids quiet, efficient running.

### TORQUE DRIVE PLUS 3 BELTS

The three principal dimensions of a belt are:

**pitch      pitch length      width**

and are used in this order as a designation e.g. 8MXP-1120-30.

Belt pitch is the distance in millimetres between two adjacent tooth centres as measured on the pitch line of the belt.

Belt pitch length is the total length of the belt (circumference) in millimetres as measured along the pitch line. The theoretical pitch line of a belt lies within the tensile member.

### TEMPERATURE

Torque Drive Plus 3 belt performance is generally unaffected in ambient temperatures between -25°C and +100°C.

Temperatures beyond these extremes should be referred to your local Authorised Distributor.

## TDP3 DRIVE SELECTION PROCEDURE

### 1) Determine Drive Requirements

- a) The nature of the driving machine (usually the prime mover) and the driven machine and the duty cycle in hrs./day.
- b) The rotational speeds of the driving and driven machines.
- c) The power capability and starting arrangements of the prime mover and the power absorbed by the driven machines.
- d) The required drive centre distance and the machine shaft diameters.

### 2) Calculate Design Power

Select a service factor from the table – page 90. Include an additional factor if the drive is speed increasing.

Multiply normal running (absorbed) power by the service factor to give **design power – kW**.

### 3) Belt Pitch

Use the **belt pitch** selection guide - page 89 to select 8mm or 14mm pitch according to the point of intersection of the small pulley (faster shaft) rotational speed and the design power.

If the intersection lies close to the 8/14mm pitch boundary, either pitch may be appropriate, attempt the design procedure on 8mm pitch first but be aware that later criteria may make 14mm necessary.

### 4) Speed Ratio

Divide the rotational speed of the faster shaft (rev/min) by that of the slower shaft to determine **speed ratio**.

### 5) Pulley Selection

Refer to the drive tables (pages 96 to 101) for the appropriate belt pitch. From the first column select the required speed ratio and consult the next two columns for appropriate **pulley groove numbers**.

Where alternative groove number pairs are available be aware that criteria in steps 6 & 7 may influence the ultimate selection.

Consider any drive dimensional limitations by reference to pulley dimension tables on pages 102 to 104, noting that pulleys with up to 72 grooves may have flanges that determine the o/dia.

### 6) Belt Length & Centre Distance

Read along the line in the drive table for the selected pulley groove number pair and select the centre distance closest to that required. The standard **belt length** giving that **centre distance** is at the head of the column.

If centre distance is critical, be aware that alternative groove number pairs may offer a closer value with standard belt lengths.

### 7) Power Rating & Belt Width

Refer to the **power rating** table on page 89 for the chosen belt pitch, locate the small pulley groove number/rotational speed combination, and note the **power rating** (for the narrowest standard belt width).

Multiply this rating by the belt length factor for the chosen belt length, from the listing beneath the main table.

Divide the **design power** by the length corrected power rating, to give required belt width factor. Refer to the width factors below the rating table and select the belt width with a factor equal to or greater than required.

### 8) Shaft Sizes

Check the **bore capacity** of the chosen pulleys against the pulley dimension tables on pages 102 & 104.

If the pulleys will not accommodate the drive **shafts** it will be necessary to consider other pulley combinations, possibly using an alternative belt pitch.

### NOTE

An optimum drive will use a belt of width factor just greater than that required. If alternative groove number pairs can give close to the required speed ratio, slightly larger pulley groove numbers may allow a narrower belt, or slightly smaller groove numbers may be possible with the same belt width.

Larger diameter pulleys typically reduce bearing and shaft loads.

Avoid drives where the belt width exceeds the small pulley diameter.

## EXAMPLE

### 1) Drive Requirements

- a) AC cage rotor electric motor driving to a rotary gear pump. 24 hr/day.
- b) 1450 rev/min motor, pump to run at 740rev/min +/-5%.
- c) 60 kW motor, soft start – no pump absorbed power given.
- d) Centres 800/850mm, motor shaft 60mm, pump shaft 75mm.

### 2) Design Power

Service factor for medium duty, soft start, 24 hr/day = 1.7.

Design power =  $1.7 \times 60 = 102 \text{ kW}$ .

### 3) Belt Pitch

Pitch selection chart shows intersection of 1450 rev/min and 102 kW to be within the capability of 14mm pitch.

### 4) Speed Ratio

$1450/740 = 1.97:1$

A 2:1 ratio satisfies the +/-5% criterion.

### 5) Pulley Selection

From page 100, 32 to 64 grooves is one combination giving 2:1 ratio.

### 6) Belt Length & Centre Distance

A belt length of 2310mm gives centres of 816mm.

### 7) Power Rating & Belt Width

The power rating table shows a value of 46.74 kW for a 32 groove pulley at 1450 rev/min for a 40mm wide belt.

Belt length factor for a 2310mm belt = 1.0 - no change to power ratings.

$102/46.74 = 2.18$ . Next larger standard width factor = 2.31 for 85mm wide belt.

### 8) Shaft Sizes

The 32-14M-85 pulley uses a 2517 Taper Lock bush, max. bore 60mm – OK.

The 64-14M-85 pulley uses a 3525 Taper Lock bush, max. bore 100mm – OK.

## DRIVE SPECIFICATION

Motor pulley: 32-14M-85 HTD pulley.

Taper Lock bush: 2517/60mm.

Driven pulley: 64-14M-85 HTD pulley.

Taper Lock bush: 3525/75mm.

Belt: 14MXP - 2310-85 Torque Drive Plus 3 belt.

## DRIVE ORDERING INSTRUCTIONS

A complete drive usually consists of five components:

two pulleys, two Taper Lock bushes & one belt.

1. Pulleys. Standard HTD pulleys. Codes are shown on the dimension tables, pages 102 to 104
2. Taper Lock bushes. Bush sizes are shown on the pulley dimension tables. Bush codes are on Shaft Fixings pages 126 & 127.
3. Belts. Belt codes are shown on page 87.

The drive selection above would be ordered as:

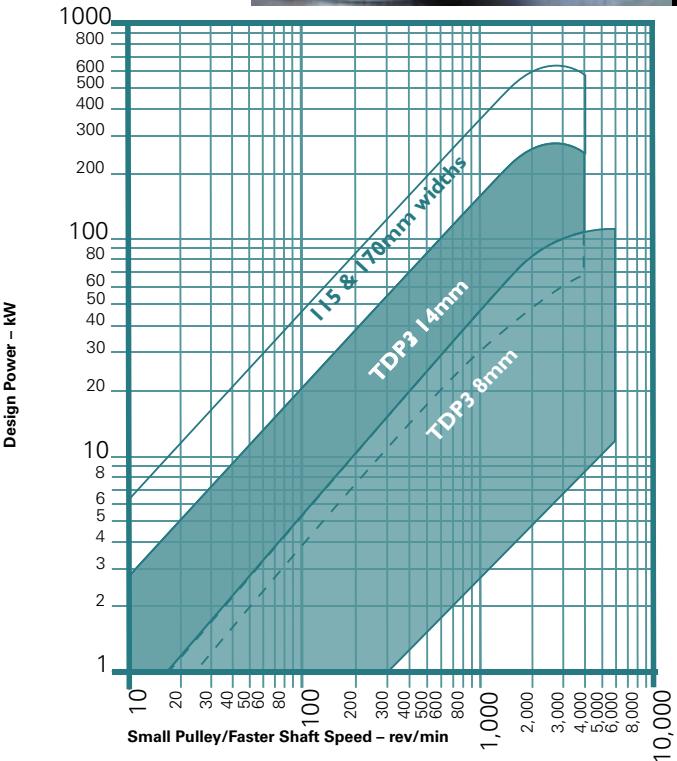

Driving pulley	32-14M-85	Code 043R0032.
Taper Lock bush	2517/60mm	Code 029M0060.
Driven pulley	64-14M-85	Code 043R0064.
Taper Lock bush	3525/75mm	Code 029J0075.
Belt	14MXP-2310-85	Code 286R0231.

TYPES OF DRIVEN MACHINE		TYPES OF PRIME MOVER					
SPECIAL CASES		'Soft' Starts			'Heavy' Starts		
<b>For speed increasing drives of:</b> <b>1.00 - 1.24 - no additional factor</b> <b>1.25 - 1.74 - add 0.1</b> <b>1.75 - 2.49 - add 0.2</b> <b>2.50 - 3.49 - add 0.3</b> <b>3.50 and greater - add 0.4</b>		AC electric motors – star / delta start – synchronous – split wound – inverter control			DC electric motors – shunt wound – stepper motors		
<b>Seasonal / intermittent use - subtract 0.2</b> <b>Idler pulley used on drive - add 0.2</b>		I/C engines with 4 or more cylinders. Prime movers with centrifugal clutches or fluid couplings.			AC electric motors – DOL start – single phase – slip ring		
		I/C engines with < 4 cylinders			DC electric motors – series wound – compound – servo motors		
		Hours per day duty			Hours per day duty		
		10 and under	Over 10 to 16	Over 16	10 and under	Over 10 to 16	Over 16
<b>LIGHT DUTY</b> Agitators (uniform density), Bakery machinery: Dough mixers, Blowers except positive displacement. Centrifugal pumps and compressors. Belt conveyors, (uniformly loaded). Exhausters. Fans up to 7.5 kW. Paper machinery: Agitators, calenders, dryers, Printing machinery: Linotype machines, cutters, folders. Screens: Drum, conical. Woodworking machinery: Lathes, band saws.		1.2	1.4	1.6	1.6	1.8	2.0
<b>MEDIUM DUTY</b> Agitators and Mixers (variable density), Belt conveyors (not uniformly loaded), Brick and clay machinery, augers, mixers, granulators. Fans over 7.5 kW. Generators, Line shafts. Laundry machinery. Punches, presses, shears. Printing machinery: Presses, newspaper, rotary embossing, flat bed magazine. Pumps: Positive displacement, rotary. Screens, vibrating. Machine tools.		1.3	1.5	1.7	1.7	1.9	2.1
<b>HEAVY DUTY</b> Blowers, positive displacement. Bucket elevators. Centrifuges. Conveyors: Drag, pan, screw. Paper machinery: Beaters, jordans, mash pumps, pulpers. Pumps, piston. Pulverizers. Woodworking machinery. Textile machinery. Exiters.		1.5	1.7	1.9	1.9	2.1	2.3
<b>EXTRA HEAVY DUTY</b> Brick machinery, pug mills. Compressors, piston. Crushers: Gyrotary, jaw roll. Hoists. Mills: Ball, rod, tube, rubber. Rubber machinery: Calenders, extruders, mills.		1.7	1.9	2.1	2.1	2.3	2.5

**BELT DIMENSIONS****PULLEYS**

The three principal dimensions of a pulley are:

**number of grooves      pitch      width**

and are used in this order as a designation e.g. 72-8M-50.

On the pulley, pitch is the distance between groove centres and is measured on the pulley pitch circle.

The pitch circle of the pulley coincides with the pitch line of the belt running in it. The pulley pitch diameter is always greater than its outer diameter.

Torque Drive Plus 3 belts run with standard Fenner Taper Lock HTD pulleys.

Standard pulley dimensions are listed in the tables on pages 102 to 104.

## CENTRE DISTANCE IN MILLIMETRES
